

An unlikely garden of sounds.

String phrases pick up fractured attacks. Percussion learns contour, hesitation and breath. Each leaves something behind in the other.

A sound arrives with a history.

A musical role begins with a need: hold a line, give a gesture weight, answer with an edge. The library brings a sound with its own attack, grain and internal movement. That choice starts to shape the piece before the sound is transformed.

“I'm fascinated by the unexpected combinations and unlikely paths through which the sample library answers the composition's musical roles.”

There is room for chance, but also for listening and selection. A surprising candidate can change the character of a phrase.

LISTEN / Hairline / Bow to Burr

1:02-1:12 / 4:08-4:20

Within each passage, listen for kinship between a brief, broken gesture and a longer line made from the same library material.

Keep the turns. Change the reach.

A five-note idea returns in different forms. Its line still turns up, down, up, down, but the steps grow wider or closer together. The phrase can feel related without giving away exactly where it will go.

higher

lower

phrase →

Related contours, changing reach. These drawings follow selected phrase shapes from the score.

LISTEN / Stutter Botany

1:55-2:45 / 50 seconds

Try following the gesture instead of memorizing individual notes.

[Play in the web booklet](#)

The space belongs to the phrase.

All of the voices meet in one third-order ambisonic field. That field is shaped together, then rendered into the two ear channels of the headphone mix. Position and movement become part of the arrangement.

STUTTER BOTANY

1:14

Which voices do you see?

☐ Anchor

☐ Pulse

☐ Reply

☐ Texture

☐ Violin II

A fixed view of the stored arrangement. The web booklet lets you turn the sphere and follow five voices through a short passage.

Headphones keep the left- and right-ear signals separate. The sense of location also depends on your headphones and your own hearing.

Sixteen moments in one field.

One second between drawings. The same colors follow the same roles from one sphere to the next.

Hear the passage and follow the moving field.

Speed can leave room.

Fast activity does not have to take over the whole space. In Bow to Burr, the quiet, fast passage asks for attention through detail. In Shade at Full Speed, a brief forceful moment gains its setting from the time around it.

LISTEN / Bow to Burr

3:10-3:33 / 23 seconds

Follow the quick activity inside this quieter passage.

[Play in the web booklet](#)

LISTEN / Shade at Full Speed

2:16-2:40 / 24 seconds

Hear the interruption with the material around it, rather than as an isolated hit.

[Play in the web booklet](#)

Notice how much is happening, and how much room the piece still gives you.

The opening learns to sing.

A rhythm can remain recognizable after its sound and pace change. Uneven spaces between the opening accents return inside a more lyrical phrase near the end.

The entrances keep their relative positions in time as the pattern opens out.

LISTEN / Gutter Cantus

Opening 0:00-0:10 / Return 5:00-5:30

Can you feel the same lopsided step inside the longer line?

[Play in the web booklet](#)

Remembering without completing.

The final track recalls the opening's first four notes and their lead sound. The fifth note of that original figure is left out. Something familiar returns, with part of its answer still missing.

Four notes return. The fifth place stays open.

Go back to the album's beginning, then hear the last passage. The rest of the arrangement continues around that incomplete gesture.

LISTEN / Wild Grafting

4:40-5:00 / 20 seconds

Follow what returns, and where the familiar phrase leaves an opening.

Wild Grafting with the Garden Voices

These six pieces return to the album's original score, drawing from a different collection of appropriated short samples, many containing voices. New sounds take on the same musical roles.

The written notes, timing and paths through the ambisonic field stay in place. Each new sound brings a different grain, attack and sense of weight.

01 / Hairline Murmurs	4 : 00
from Hairline	

02 / Breath to Burr	5 : 00
from Bow to Burr	

03 / Stutter Chorus	4 : 30
from Stutter Botany	

04 / Shade in Full Voice	6 : 00
from Shade at Full Speed	

05 / Gutter Choir	5 : 30
from Gutter Cantus	

06 / Wild Voices	5 : 00
from Wild Grafting	

[Listen to the complete companion album](#)

Carry the connections back into the album.

The listening studies offer small windows into six complete pieces. Listen again without watching the drawings. Notice which relationships stay with you.

Headphone listening recommended. Wild Grafting was composed in third-order Ambisonics and rendered to binaural stereo. Spatial placement and movement are part of the music, shaping how its fragments meet, separate, and return.

On a phone

Open the hosted booklet in your browser for the sound examples, moving field and complete Garden Voices album. This PDF is the portable reading edition.

On a computer
